Mines and Mining--Activities in Ore Districts of Utah

WHAT IS NEEDED TO HELP MINING

Troublesome Question Is Be- South America Is Pushing ing Asked Everywhere Over Mineral West.

INDUSTRY IS LAGGING

Largely to Abuses of Boom Times.

There is no denying the fact that the

western mining industry is in the strong-

est yet weakest position of its historystrongest because all the big organizations are producing the largest tonnage and making the greatest earnings of their history, and weakest because there are practically no new fields being brought into being. little if any new financing of the prospect. There appears to be reason, therefore, for the frequently heard question as to whether or not there is to be a revival of mining in the west, and Utah in particular, and how. When times were good during the boom of a few years ago, and everyone had blenty of money, almost anyone could organize a mining company upon any sort of a piece of mining property, whether he owned the ground or not, and what is more, he succeeded in financing his ersanization without great difficulty. their history, and weakest because there

Stock Game Overdone.

But the game was far overdone, and those who killed the game have no one but themselves to blume. They auctioned off their treasury stock, frequently selling their own partional stock in the bargain, thereby throwing the whole burden upon the investing public, while, having little or no stock of their own left, and with bank accounts in healthy condition at the expense of the public, the organizers lost all interest in their propositions and let things go to pieces with streat cheerfulness.

streat cheerfulness.

The average man in Etah can count off a few score such promotions without cast extra effort, and with practically each man you meet a vietim to a more or less extent of the game, and it is little wonder that the public is falling to take interest nowndays in mines and mining. There have been entirely too many dishonest, or at least unwise, mining promotions everywhere, and it will take a very innusual state of affairs to alter the impressions of the public. It appears like a situation which time only will remedy.

One lears frequently that legitimate derprise in mining is as sure to cap sof rewards as in other line of human sidayor, but the trouble is even legithmate effort in mining is hased upon take pressure so often which in any ther line of effort would instantly put to accurate the contract man upon his guard.

Speculative Mining.

Mining is as legitimate as any calling marikind follows but there is too much attention paid to the stock end, the real gamoling phase, and to a great many mining consists of forming comtants, with big share capitalizations, for the public to absorb. This has been retined very atths in Nevada "speculative mining."

letimed very aptity in Nevada "speculative mining.

The present situation is a difficult one and time out of ten men you ask appears to see relief only in the "obability that good times will return again, when people will lave an abundance of money, and when the same old programme will be tried out again. But it will be a said day for the legitimate industry when the conditions of 1906-7 are repeated.

What we need, one frequently hears the promoter say is a new crop of "lambs," But what if the public feels that what we need is a new crop of mining men?

IDAHO MINING MEN.

Utah, to say:

UNITED STATES IS MAY DAY HAS LEAD LOW-COST COPPER MARKET FOR METAL

Larger Output Steadily Upon Our Refineries.

A striking feature of our copper statistics in recent years has been the prefominant part that the United States has grandally been assuming in South Present Conditions Are Due American copper mining, says the Engineering and Mining Journal, which continues: It is within recent memory that South America was almost a terra incog-States were concerned.

We knew Peru as a country conquered some rulers called Incas, who were supposed to have secured the aforesaid to have three cars of zinc ore on the treasure from the mines of Cerro de way to the market during the week.

reasure from the mines of Cerro de Pasco. And we knew that Chile furnished our agriculturists with sodium nitrate and exported some copper in a form known as "Chile hars" to smelters in Wales. This was about the extent of our knowledge.

Some Mines Producing.

Time has changed all of that, however, and now we are working for copper those self-same mines of Cerro de Pasco and smelting the ore with the aid of Dwight-Lloyd sinterers and basis converters; and in Chile we are working low-grade disseminated ore at the Braden mine by floation and other new-fangled processes and are getting ready to exploit Chuqui camata, which is supposed to possess the second largest copper deposit of the world (Butte being hors concours), and (Butte being hors concours). and now we are working for coppeself-same mines of Cerro de Pasco and

ORE WELL AS ZINC

Worth Twenty Thousand Dollars at Least.

May Day Mining company in January shipped a total of twenty-six cars of ore of which about one-third was lead, the shipments was about \$500 per car, giving the company probable earnings during the month of \$20,000. Superintendent Griggs nits, in so far as people of the United States that there is a considerable zinc ore tonnage still available, and that the lead ore is opening up in splendld fashby Pizzaro, who robbed the treasures of ion on the 1000-foot level. The Uncle Sam Consolidated company is expected

ADDITION TO COPPER SURPLUS EXPECTED

James A. Pollock & Co., bankers and brokers, furnish the following, received over their private wire yesterday after-noon:

It is to be hoped that all the May Day stockholders remembered the fact that the books closed Saturday (yesterday) on the 3 cents a share dividend, and that checks will be forwarded to them on February 10. The May Day has been out of the dividend ranks for so long a time, and the stock is so widely distributed, that the directors gave more than the ordinary notice to the world of the dividend action. This is an opportunity that no shareholder should miss.

CAMP IN NEVADA INCREASE ITS FORCE NEEDED BY PRINCE

Are on the Trail of Another Ely.

According to the Eureka Reporter, the NEW COMPANY FORMED

Metal Exist in Generous Nevada Area.

A company known as the Nevadathe section better known as the Dolly the amelter, Varden and Mizpan districts, some seventy-two miles from Ely. The claims within the Nevada-Butte lines are located within five miles of the Nevada Northern Railroad tracks, and well within the enormous porphyry area which is believed to contain the next big perphyry mining camp of the west.

There are 1,000,000 shares in the new company, the par value of which is 25 comis a share. Martin Benson is president. A. B. Donnelly, vice president. Herman Barnett, secretary and treasurer. These, with Henry Jones, T. F. Bannigan, C. D. Hard and W. H. Bramel, complete the board. The company intends to begin active development operations as soon as weather conditions will peculia this spring.

Drilling Shows Ore.

Drilling Shows Ore.

The Nevada-Butte claims are located on the northern end of the mineralized perphyry belt of the district, on south end and in the center of which great zone a considerable amount of claim drilling has been done by Captain J. A. Hassell of New York. At a depth of 135 feet has found a large deposit of porphyry ore averaging 1.3 per cent copper, while at the depth of 135 feet the assent value was 3.9 per cent copper. In addition to the large porphyry or monitonite zone containing disseminated copper deposits closely alth to Eig, there are a number of properties of the camp that hold contact veln and fissure vein copper deposits, among which is the Nevada-Butte possessions, so the company feels certain that in addition to a probable steam shovel proposition in time it can be operated by way of shafts for the purpose of bringing to view the straight smelling grades of copper rock as well. All the copper over carry values in silver and gold.

Prospects Encouraging.

Ore Shipments.

The Utah Ore Sampling company on Saturday released nine cars of ore from Utah mining camps.

Word from Mason yesterday was to the effect that within iwenty-four hours within the past week the No. 2 furnace of the Mason Valley custom smelter had a decidedly good run, handling 972 tons of ore within this period. This means ore, not ore and flux combined. The ultimate capacity of this furnace is to be 1900 tons daily, and No. 1 furnace will have equal capacity when it again is placed in commission.

Metal Market.
